

Dr. Nick Rowell [Edinburgh University]

- I do the PSF modelling and calibration used in the Gaia data processing
- Calibration of bright ($G < 11$), red ($BP - RP > 3$) PSF is hard due to lack of suitable calibration sources
 - Can we find LPVs that are *sufficiently stable* in colour that they are safe to use?
 - AstroFlow → process Gaia DR3 epoch photometry for ~3 million objects, find stable ones
